Ha tunnel lite pro apk.

Tuesday February 11, 2020 8:06 pm PST by Eric Slivka Apple is said to be working with supply chain partners in Taiwan on several upcoming products, including a so-called "AirPod Pro Lite," according to DigiTimes. Other products mentioned include next-generation iPad, Apple Watch, and iMac models, all of which will be due for updates in the coming months, although some like the iPad and Apple Watch are unlikely to launch before September. The ... Motorola is keeping its return to flagship devices running for the second year in a row with today's global announcement of the Edge 20 Pro, Edge 20, and Edge 20 Lite. The top-end 20 Pro includes a periscope-style telephoto lens for the first time in a Motorola device and includes a Snapdragon 870 processor. All three devices support sub-6GHz 5G, offer 108-megapixel rear-facing cameras, and include 6.7-inch OLED screens with fast refresh rates. They're due to arrive in August in Europe, Latin America, and Asia. While Motorola doesn't offer specifics, it says that it plans to bring a 5G Edge device to North America this fall. The Edge 20 Pro comes in a handsome indigo vegan leather option. Image: Motorola Priced at €699 (about \$830), Edge 20 Pro comes with many features common to the premium midrange class, including a Gorilla Glass 5 front panel, a 144Hz screen refresh rate, and 12GB of RAM with its capable 800-series chipset. Its main rear camera uses a 108-megapixel 1/1.52-inch sensor and f/1.9 aperture, specs that line up with last year's Edge Plus camera. There's also a new 8-megapixel 5x telephoto periscope-style camera with optical image stabilization. A 16-megapixel ultrawide does double duty as a macro camera, along with a 32-megapixel selfie camera around front. A couple of specs don't quite measure up to the flagship class, though, which was something we noted about its "great but not quite good enough" Edge Plus predecessor. For starters, Motorola is committing to only two OS upgrades for the device, which ships with Android 11 — a policy that lags behind much of the field. The 4,500mAh battery can be charged via fast 30W wired charging but there's no support for wireless charging. And its IP52 rating means it's protected against splashes of water, but isn't guaranteed to survive full submersion like the IP68-rated Samsung Galaxy S21. The Edge 20 offers a 3x telephoto lens rather than the 5x periscope zoom on the 20 Pro. Image: Motorola The €499 (about \$590) Edge 20 gets the same 6.7-inch OLED with 144Hz refresh rate (though just Gorilla Glass 3 on the front), but includes a stepped-down Snapdragon 778 processor. Rather than the periscope zoom, it offers a stabilized 8-megapixel 3x telephoto camera, but its main and ultrawide cameras match those on the 20 Pro. The Edge 20 Lite packs a bigger 5,000mAh battery. Image: Motorola The budget-friendliest Edge 20 Lite, priced at €349 (about \$415), uses a MediaTek Dimensity 5G-B chipset, includes a 6.7-inch OLED with a slower-but-still-fast 90Hz refresh rate, skips the telephoto camera altogether, and includes a bigger 5,000mAh battery. It maintains the IP52 rating of the other two devices and still includes 30W fast charging. We liked last year's Edge phones, particularly the more attractively priced midrange Edge, and a lot of that was thanks to some strong camera capabilities. It's promising to see Motorola leaning into that strength with a new telephoto lens, though the highest tier device still appears to lack a couple of key specs to compete well in its class. Maybe the midrange will be Motorola's sweet spot again this year. Correction July 29th, 3:10PM ET: A previous version of this article stated that Motorola has only guaranteed one Android OS upgrade for the Edge 20 devices; it has committed to two. We regret the error. (Pocket-lint) - The top-end Huawei Mate series is back for 2018 - and in more forms than ever before. Joining the already-released Mate 20 Lite will be the Mate 20 and Mate 20 Pro. So how do they differ and does it make sense for Huawei to range such a variety of phones within this series? Design Mate 20 is the largest of the three, the Lite in the middle, the Mate 20 Pro being the smallest footprint of all. Mate 20 Pro: No headphone jack (USB-C headphones included) / Mate 20 Pro: In-screen fingerprint scanner / Mate 20 & Mate 20 Lite: Rear-positioned fingerprint scanner / Mate 20 Pro & Mate 20: Pink Gold, Midnight Blue, Emerald Green, Twilight, Black / Mate 20 Lite: Sapphire Blue, Black The Mate 20 Lite launched in the first week of September 2018, as a preface to the series. It set out the stall for the approximate footprint of the three phones' designs. However, the Mate 20 Pro, with its curved glass edges on every side and slightly smaller screen, is actually the smallest device of the lot. The Mate 20 is the biggest, on account of its wider form and possessing the biggest screen of the bunch. Huawei Mate 20 Lite review The Mate 20 and Mate 20 Lite both use rear-positioned circular fingerprint scanners. The Mate 20 Pro is the only model of the three to ape its Porsche Design Huawei Mate RS cousin with an in-screen fingerprint scanner. However, this technology has been vastly improved in the Huawei proper - it's much quicker and reliable, thanks to a far more thorough sign-up system, and can be used to sign into apps where it couldn't previously. All three phones opt for a glass-heavy design, as is on trend, with the Mate 20 Pro and Mate 20 models offering what Huawei calls 'Hyper Optical Pattern' in its green and blue finishes - this is like a laser-etched pattern, which adds grip, a different visual dynamic and supposedly helps avoid fingerprint smears (it falls on this account, as we found when handling the devices - it's actually the darker colours that help hide such smears). You won't find a 3.5mm headphone jack in the Pro, while both other models feature this for wired headphones. Display Mate 20 Pro: 6.39in OLED display with curved glass edges, 19.5:9 aspect ratio, 3120 x 1440 resolution, full notch / Mate 20: 6.53in LCD display, 18.7:9 aspect ratio, 2244 x 1080 resolution, 'dewdrop' notch / Mate 20 Lite: 6.3in LCD display, 18.5:9 aspect ratio, 2340 x 1080 resolution, notch The Mate 20's screen is notably larger due to its aspect ratio: the extra width gives the phone a much wider span than the other two. It has to smallest notch, thought, as this houses the least front-facing tech - hence Huawei opting for the 'dewdrop' design here. The most impressive screen of the bunch is the Mate 20 Pro's OLED panel. It's got curved glass to every edge - including on the rear, so it's fully symmetrical - the highest resolution of the bunch, while its size feels perfect in the hand (the Mate 20 is too wide, the Pro is spot on). It has the biggest notch of the three, though, on account of its variety of sensors - 24MP RGB camera, dot projector, proximity sensor, illuminator, and infrared camera - used for a 3D face unlock (the other two devices offer face unlock, but it's less sophisticated). Specs Mate 20 Pro & Mate 20: Kirin 980 octa-core processor (2x 2.6GHz, 2x 1.92GHz, 4x 1.8GHz) / Mate 20 Lite: Kirin 710 processor (4x 2.2GHz & 4x 1.7GHz) In terms of power there's no difference between Mate 20 and Mate 20 Pro: both get the top-spec Kirin 980 chipset, which uses a mixture of 'big, medium, little' processing cores and dual neural processing units (NPU) to divide tasks most appropriately to help reserve power. Huawei claims it's 20 per cent faster and 40 per cent more efficient than the previous Mate 10 Pro setup. The Mate 20 Lite, as its name suggests, goes lighter, with a Kirin 710 processor. As we've said in our review of the phone, this chipset doesn't quite cut the mustard, with limitations to the power on tap. Battery Mate 20 Pro: 4200mAh / Mate 20: 4000mAh / Mate 20 Lite: 3750mAh / Mate 20 Pro and Mate 20: Qi wireless charging / Mate 20: no wireless / Mate 20 Pro only: 40W fast-charging As we confirmed in our Mate 20 Pro battery story, the top-end phone is the one with the biggest battery capacity. Indeed, at 4200mAh it's the most capacious battery to ever appear in a Mate device. Those extra milliamperes ought to help counter the additional resolution available. The Mate 20 sticks with the same battery as per the Mate 10, at 4000mAh. The Lite is a little less, but as we found in our review of the device it's still ultra long-lasting. All three Mate devices have glass finishes. For the Mate 20 and Pro this opens the door to Qi wireless charging. There's even a feature which permits other Qi devices to charge directly from the Huawei device, if the option to share power is selected within settings - it's just a case of putting devices back-to-back (we tested it out with an iPhone and it works just fine, although there's no word on how fast this method is). Fast-charging is a staple for all three Mate devices, but the Pro amps things up by offering 40W charging - meaning from dead it can charge to 70 per cent in just 30 minutes. That's crazy fast - only the 50W Super VOOC charger of the Lamborghini Oppo Find X can surpass it at present. Cameras Mate 20 Pro & Mate 20: Triple rear Leica cameras (all colour, no mono) and single front-facing camera / Mate 20 Pro: 40MP wide-angle f/1.8, 20MP ultrawide-angle f/2.2, 8MP tele f/2.4 / Mate 20: 12MP wide-angle f/1.8, 16MP ultrawide-angle f/2.2, 8MP tele f/2.4 / Mate 20 Pro & Mate 20: Super macro mode (2.5cm from lens focus) / Mate 20 Lite: Dual rear cameras and dual front-facing cameras / Mate 20 Lite: 20MP f/1.8, 2MP depth sensor All devices: AI (artificial intelligence) mode / Mate 20 Pro & Mate 20: 24MP front-facing camera / Mate 20 Lite: 8MP front-facing camera In the camera department the Lite differs dramatically from the other two models, given its dual rear cameras. It's a step behind the P20 Pro in this regard too. The Mate 20 and Pro have a wholly new Leica camera setup, comprising three all-colour sensors to the rear in wide, ultra-wide and telephoto forms. Yep, the whole idea of the monochrome sensor has been banished this time around, with Huawei claiming the main sensor delivers more than enough information. We'll just have to wait and see what the results are like to see if it's a winner or not. The pinch-to-zoom technique now offers between 0.6x and 5x zoom as standard, with that wider-angle option being the boldest new feature. Using AI (artificial intelligence) the camera can also auto-select between lenses when it thinks appropriate: in Super Macro mode, for example, the camera auto recognises it's very close to a subject (up to 2.5cm) and automatically deploys the super-wide lens as this can focus. All three devices offer Master AI, where the camera can auto-detect scene types and adjust its settings accordingly. In the Lite, however, there's not the latest software so it doesn't have the same wide range of features as the Mate 20 and Pro (more on that below). Software Mate 20 Pro and Mate 20: EMUI 9.0 at launch / Mate 20 Lite: EMUI 8.2 (9.0 upgrade to come) The Mate 20 and Pro launch with EMUI 9.0 (built over Android Pie 9.0), which adds some extra features, while the Mate 20 Lite currently runs on EMUI 8.2 (update to 9.0 pending). HiTouch, which is a bit like Google Lens, allows for a double thumb press-and-hold on the screen to generate a query which, based on the image captured, will be contextually answered. There's also HiVision, within the camera app or search bar, which uses the camera to auto recognise landmarks, artworks, calorie content in food, and access shopping. Microsoft's Translate is also built into HiVision, which is accessed via the Camera app. Desktop mode on a connected PC now doesn't require a tethered cable connection, just a MirrorCast capable device. Conclusion The Mate 10 Pro was one of our favourite flagship phones, so the Mate 20 Pro has big boots to fill. And it's this top-end device that fully succeeds in doing just that. Its form is a visual delight - although it looks rather like the Samsung Galaxy S9+ - while the array of power, features and longevity ought to see this handset thrive. There are only a couple of blips: the square arrangement on the rear containing the cameras is ugly; while the artificial intelligence in the camera can be overkill. The Pro also outshines the step-down Mate 20 in almost every department, which brings into question whether there's still the need for the wider form-factor device. We suspect, like with the Mate 10, that this handset will be harder to locate in the UK and only appear in select EU markets. As we've made clear with our Mate 20 Lite review, the bottom-end phone doesn't earn its place in this supposedly premier line-up due to its performance. But ignore that bump in the roadmap, look to the impressive Pro model and we think Huawei has a potential smash hit on its hands. Writing by Mike Lowe.
